

ChatRTDIP

The mission of the project, in collaboration with Shell and under the AMOS framework, is to develop a cutting-edge tool, user-friendly, that seamlessly blends chat AI technology with the robust data processing capabilities of RTDIP. The project is dedicated to creating a platform where users can effortlessly configure data pipelines using a conversational interface.

- ↗ Benefits for analyzing real-time sensor data:
- Accessible
 - Adaptable
 - Reducing the learning curve, time, and effort
