Goals	Create a ChatBot per the company's requirements in a successful way
	Maintain an agile manner of work in a good atmosphere
Meeting norms	The cameras should be turned on for better human communication
	Meetings must not exceed 30 min over time, otherwise schedule another meeting.
	Delays should be informed and handled on agile way (write in the telegram group)
	weekly meeting
Working norms	Contributing and communicating openly
	Keep respect during possible conflicts (on technical issues z.B)
Coordination norms	Everyone sticks to assigned roles
Communication norms	communicate in advance and don't leave it for the last minute (don't be ashamed of asking simple questions)
Consideration norms	We communicate conflicts openly
	Team final decisions are based on voting
Cont. improvement norms	Improvement suggestions are welcomed
	Happiness index and standup emails to be reviewed in case of non-satisfaction
Rewards	Obi makes the team a cake - final reward
	Have coffee and bring games after the mid release
Sanctions	Team will decide on the memeber's sanction accordingly
Signatures	
Scrum Master	Sara El Brak
Product owner	Cecilia Betancourt Barrita
Product owner	Avi Katziuk
Software developer	zain hazzouri (TU Berlin)
Software developer	Obi Smadi (TU Berlin)
Software developer	Nahrain Gtari
Software developer	Linda Najar
Software developer	Arka Acharya
Software developer	Kim Jana Eiken (TU Berlin)

Product Vision	Project Mission
<p>UPDATED 03.12.23 Introducing ChatRTDIP. By leveraging the power of large language models and generative AI, this product aims to offer an intuitive, user-friendly interface for establishing RTDIP configurations. The focus is on simplicity and efficiency, allowing users from various backgrounds, technical or otherwise, to interact with and create complex data extraction configurations with ease. The integration of the RTDIP and RTDIP SDK as a knowledge base, combined with a chat engine, will result in an accessible and adaptable product, ultimately reducing the learning curve, time, and effort required in analyzing real-time sensor data.</p>	<p>UPDATED 03.12.23 The mission of the ChatRTDIP project, in collaboration with Shell and under the AMOS framework, is to develop a cutting-edge tool that seamlessly blends chat AI technology with the robust data processing capabilities of RTDIP. The project is dedicated to creating a platform where users can effortlessly configure data pipelines using a conversational interface.</p>

Sprint	Topic	Goal	Feature Name	Est. Size	Est. Remaining	Real Size	Real Remaining
Release							
Total				189	189		
Sprints							
1	Project Kickoff and Planning			5	189	5	189
2	Chatbot Software Architecture and Framework			26	184	20	184
3	Natural Language Processing Integration			16	158	11	164
4	User Interaction and Model Enhacement			21	142	11	153
5	User Interface and Conversation Flow			63	121	14	142
6	Refine Interactive Communication			58	58	9	128
...					0		119
Features							
1	Project Kickoff and Planning						
		Establish project infrastructure and team roles					
		Create bill of materials		3		3	
		Define regular meeting with IP		1		1	
		Pipeline workshop with IP		1		1	
		Build process review - Homework		1		1	
2	Chatbot Software Architecture and Framework						
		Define the software architecture and prepare the necessary data for training the chatbot					
		Connect the bot to the RAG Hub		2		2	
		Collect the data for the RAG content Hub		2		2	
		Initialize a RAG content Hub		8		5	
		Create a pre-alpha version of UI		8		5	
		Create the first output		3		3	
		Environment set up (pipeline)		3		3	
		Create a Software Architecture Document		3		3	
3	Natural Language Processing Integration						
		Develop the core NLP model for chatbot understanding					
		Create and configure inference end point for the model		5		5	
		Source processing power		3		3	

Sprint	Topic	Goal	Feature Name	Est. Size	Est. Remaining	Real Size	Real Remaining
			Developing a Model-Agnostic approach for Enhacing Speed Performance	5			
			Finding and Configuring an alternative UI	3		3	
			Initialize the full version of the bot	5			
4	User Interaction and Model Enhancement						
			Create wireframes and UI mockups.				
			Create a docker image to run the inference endpoint	5			
			Write a document with steps we need to take to get the bot working	3			
			Test Plan for Prompt Engineering	2			
			Initialize a Domain-Specific Dataset (DNS)	3			
			Initialize a README File	3			
5	User Interface and Conversation Flow						
			Design the chatbot's user interface and conversation flow.				
			Finding and Configuring an alternative UI	3		3	
			Connect the endpoint to the original UI	3			
			Inference Endpoint and Docker Container Creation				
			Text generation inference configuration				
			Create a new docker file	5			
6	Refine Interactive Communication						
			Create requirement.txt	2			
			Display code on the right	3			
			Enable iterative communication with the bot	5			
			Set up a query catalog - single source of truth	5
